Cloud WordPress Hosting

Your guide to our super-fast, super-secure WordPress platform.

Cloud WordPress Hosting

Our super-fast, super-secure WordPress platform has been optimised for every element of the software.

With superfast StackCache caching, WordPress Tools, Staging, SSD storage, automatic updates, clever database handling, load balancing and much more, it's the perfect home for your WordPress website.

Key Features

- Superfast StackCache caching

- Automatic WordPress core updates

- WordPress Tools

- One-click WordPress Staging

- Global Content Delivery Network and Website Acceleration

- Powerful platform specifically built for WordPress hosting

- Green hosting on servers powered by 100% renewable energy

- Optimised speed and security for WordPress

- Hassle-free migrations of existing WordPress websites

- Intuitive hosting control panel

- Secure, state-of- the-art UK data centre

- High quality hardware including 100% SSD storage

- Friendly support

Designed just for WordPress

We've developed our own hosting platform just for WordPress websites. So you'll get a robust, secure hosting environment and consistently excellent speeds. Our hosting is designed to scale as your website grows, meaning the same great performance no matter how popular you get.

To keep our WordPress platform running optimally, we only allow WordPress to be installed. You're still free to write, add and modify WordPress-compatible code and files, such as themes, plugins, media uploads, and so on. You'll also have full access to mailboxes and email accounts outside WordPress. If you think you may want to create a non-WordPress website or install/upload something outside WordPress, our standard Web Hosting plans are a better choice for you.

UK and US data centres

Our state-of-the-art data centres offer the latest in security technologies and are manned 24/7, ensuring your data and websites are secure and monitored at all times. We have a resilient national network and enterprise level cloud platform so you get the best possible hosting experience.

Our email servers are kept separate from our web hosting servers, so there is no chance of either affecting performance.

Green Hosting

Our web hosting is powered by renewable energy: wind and solar. Our environmental award-winning data centres have a PUE (power usage efficiency) as low as 1.12, where elsewhere you may get PUE of 1.2 or more (lower is better).

Our autoscaling platform ensures that your website gets the resources it needs when it's busy. That also means that we can save energy when websites aren't busy.

Designed for speed

All our WordPress packages are designed to give you optimal website performance, wherever your users are.

Your WordPress installation includes the StackCache plugin, which was created by us to edge-cache your content. This makes sure that your web pages load at lightning speed.

Users outside of your where your hosting is based might experience some latency connecting. So we have a state-of-the-art Content Delivery Network (CDN) that will cache your website's public content at data centres around the world. As users' requests won't have to travel so far, they'll experience faster loading speeds.

Along with our CDN, we also have a Website Acceleration Suite. This will improve your page loading times by minifying code and optimising images, automatically. You can either use our standard 'one-click' optimisation or experiment with over 30 settings, to chase the best-possible page speed scores.

Hands-free WordPress

We pre-install WordPress for you so you can get started right away. Simply purchase a WordPress package, choose your settings, and you're all set.

If you install any third party themes or plugins, you can update them yourself quickly and easily from your WordPress dashboard. We update the WordPress core for you automatically whenever updates are released, leaving you free to concentrate on your business.

We have a range of WordPress web hosting packages available to suit most web space, bandwidth and database requirements. However, if you need a custom solution, we're more than happy to create a unique plan that works for you.
